Robin Lansiquot Application Security Engineer | SCA, SAST & Vulnerability Management

lansiquo@gmail.com 647-204-5818 Toronto, Canada linkedin.com/in/robin-lansiquot dotrobin.dev

Summary

Application security engineer with 5+ years in financial services, specializing in SCA, SAST and vulnerability management. Co-led an enterprise SCA rollout across 60,000+ applications and thousands of developers. Built open-source triage tools for SCA and SAST findings (sca-triage, sast-triage) and tied vulnerabilities to realistic attack paths through hands-on offensive testing.

Skills

Application Security
SCA: JFrog Xray, Snyk Open Source, Sonatype Nexus Lifecycle / IQ Server
SAST: Checkmarx, Snyk Code, Semgrep
Software Supply Chain: Sonatype Nexus Firewall, JFrog Artifactory

Development
Python (FastAPI, pytest), Node.js, GitHub Actions, REST APIs

Penetration Testing
Nmap, Burp Suite, Metasploit; exploited MS17-010; Linux/Windows privilege escalation

Professional Experience

Staff Data Engineer, *RBC* 10/2025 – 10/2026 | Toronto
- Deployed Splunk UF and Dynatrace OneAgent across 60% of GFT production servers for centralized security logging
- Implemented SAML SSO to centralize and harden authentication across the Splunk Enterprise cluster
- Escalation point for Splunk outages, sustaining 99.9% availability for security monitoring

Application Security Specialist, *RBC* 03/2023 – 10/2025 | Toronto
- Co-led an enterprise SCA rollout, extending open-source dependency scanning to 60,000+ applications and thousands of developers
- Evaluated and selected application security tools, integrating automated security testing into CI/CD pipelines and developer workflows
- Performed SAST and SCA reviews to identify code and open-source vulnerabilities, giving application teams prioritized, actionable remediation guidance

Vulnerability Management Specialist, *Bank of Canada* 08/2022 – 03/2023 | Ottawa
- Triaged emerging CVEs with exploitability analysis, producing risk-ranked remediation priorities for application owners
- Drove remediation with engineering teams, validated fixes and briefed stakeholders on risk acceptance decisions

Security Analyst (co-ops), *Enbridge, BMO, NGen and the Bank of Canada* 08/2019 – 08/2022 | Toronto
- Vulnerability Analyst (BMO): triaged and tracked hundreds of findings, escalating critical issues to system owners
- Security Admin (Enbridge), Security Analyst (NGen, Bank of Canada): access administration, alert triage and monitoring

Projects

sca-triage, *SCA triage for npm dependencies* 2026
- An npm SCA scanner that ranks vulnerable dependencies P1–P3 by whether the app's code actually loads them, fails CI only on P1, and applies the smallest safe upgrade, verified by the project's own tests. On OWASP NodeGoat it narrowed 180 vulnerable packages to 13 that need fixing now.

sast-triage, *Pull request SAST (GitHub App)* 2025 – Present
A Python GitHub App that runs Semgrep on each pull request's changed files and posts line-level Check Run annotations, with signed webhooks and fail-closed scanning. Next: P1–P3 triage of new vs pre-existing findings.

Certificates

- eJPT Certification
- PNPT (in-progress)

Education

Software Development & Network Engineering, *Sheridan College*
