Robin Lansiquot

Security Engineer | Penetration Tester

lansiquo@gmail.com 647-204-5818 Toronto, Canada linkedin.com/in/robin-lansiquot

Summary

Application security specialist with financial-services experience serving as one of the leads for an enterprise SCA rollout and owning security tool evaluations, code reviews, and remediation decisions. Combines hands-on application security assessment with open-source governance and vulnerability management to guide risk-based remediation and integrate security testing into developer workflows.

Professional Experience

Application Security Specialist 03/2023 – 10/2025
RBC Toronto

- Led the enterprise's SCA rollout, expanding open-source dependency assessments across 60,000 applications and thousands of developers.
- Evaluated application security tools and integrated security testing into developer workflows
- Conducted SAST and SCA reviews to identify application and open-source dependency vulnerabilities, providing application teams with actionable remediation guidance.

Vulnerability Management Specialist 08/2022 – 03/2023
Bank of Canada Ottawa

- Prioritized emerging vulnerabilities through CVE and exploitability assessments, translating technical findings into remediation priorities for responsible teams
- Coordinated remediation with responsible teams and validated follow-up results, documenting evidence for risk and audit reporting
- Validated security remediation efforts to ensure effective risk reduction and maintain alignment with regulatory audit compliance.
- Produced security risk assessments and technical briefings to guide stakeholder remediation decisions.

Staff Data Engineer 10/2025 – 10/2026
RBC Toronto

- Deployed Splunk Universal Forwarder and Dynatrace OneAgent across 60% of production servers within the GFT business line, supporting centralized logging and application monitoring.
- Implemented SAML-based single sign-on to centralize authentication across the team's Splunk Enterprise cluster.

Certificates

- eLearnSecurity Junior Penetration Tester (eJPT)
- Practical Network Penetration Tester (in-progress)

Education

Software Development & Network Engineering
Sheridan College
Oakville, Canada

Skills

Application Security
Static Application Security Testing (SAST), Software Composition Analysis (SCA), open-source governance, security standards and security tool evaluation

Vulnerability Management
CVE assessment, exploitability analysis, risk-based prioritization, remediation validation, risk reporting
